

PATTERN RECOGNITION

<https://marclandolt.ch/Hackers-Cardgame7>

Inventor: Norman Joseph Woodland and Bernard Silver

Year: ~1949

don't trust QR-Code Apps that much

Procastinate when 80% solved

<https://0x8.ch/HackersCardgame7>

Inventor: xxxx

Year: ~1999

Algorithm on my "computer" when i try to do things, to fix things, to finish relevant business. There are problems like extending pam-usb with uidsk2 where **unknown** starts an algorithm, that prevents me from solving the problem. The algorithm starts tons of new problems that are also relevant. I try to solve them all but always when i solved 80% of a tasks, the next problem opens or even starts a a suicide death bot (a16) against me. Prevents that problems are finally being solved. There are some sort of "resonators" (Ingress), that prevent the whitethat hacker / whistleblower from solving it. Resonators maybe just other people that are being activated. If these are real people they are maybe being activated with BigData from the NSA / CIA Data Retention System that would prove earlier signs of this human(?) "BOTS". Mathematically spoken possibly / partiallyly transitive. t1... transmits now "this is non-solvable problem, hahaha" (= psychological warfare)

PSYCHOLOGICAL-PROFILE FROM EYE-MOUEMENT

<https://0x8.ch/HackersCardgame7>

Inventor: xxxxx

Year: ~1999

If you have something like google glasses, a retina-CCD Chip one could easily enumerate and footprint the psyche / the soul of the victim. if you would have at least 2 RFID chips on your head, or easier two LC-Cirquits on your head and a 3D model of the room, one could create such a profile.
I make this card neutral, because it could be used for good and also for bad.
Worst case they use such things to create a11 cards...

Bijektivtaet REVERSIBILITY

Die Funktion $f: \mathbb{R} \rightarrow \mathbb{R}, x \mapsto x + a$ ist bijektiv mit der Umkehrfunktion $f^{-1}: \mathbb{R} \rightarrow \mathbb{R}, x \mapsto x - a$.

REVERSIBILITY
Right kindly please his Mistress to track him down if he forgets to play this Card

<https://0x8.ch/HackersCardgame7>

Inventor: Good

Year: ???

If you need to **punish someone** then do it **bijektiv**. Best thing is not to attack a person physically or in the mainframe, or with cyberwar... **you could risk his or your life**. There are seldom cases, for example if they want to (cyber-) [rape | attack] your girl..., in this case it is possibly ok to **defend yourself** and **younger against the offender**. Keep in mind that you defend yourself without causing permanent harm. Maybe the offender is **remote controlled**. See cards t1... t*

If there is something like death sentence for example in Texas then and would kill an innocent you would find that out to late, then the whole state could sentenced to death to. In Switzerland there are no official death sentences.

Efficiency Detection

<https://0x8.ch/HackersCardgame7>

Inventor: ????

Year: ~1999

When i work with my computer there seems to be an algorithm that detects when my work is efficient and then stops me with dirty tricks...
The problems are not always in the same order, but efficiency seems to be an eventtrigger that starts such things smoke1, m98, m99, acid in my face cream...

Hierarchy

<https://0x8.ch/HackersCardgame7>

Inventor: Satan

Year: ???

Hierarchical Systems tend to lack Moral. Most Companies have hierarchical structure often they abuse small left wing people in the lowest rank to make the customers think that the company and its management is good and trustworthy. In case such a left wing punchingball would upgrade to a Whistleblower and find out about the dark management and that they abuse the young people as such punching balls they would possibly attack him with a16, m38, t15.... Maybe played with a14, which means that there will be also some bad left wing people.
The Sad thing is, that this is business as usual.

NORMAL-DISTRIBUTION

<https://0x8.ch/HackersCardgame7>

Inventor: Carl Friedrich Gauss

Year: ~1801

E.g. the distribution of intelligence in society is normal-distributed. If you would find out that people that run amok or suicide quite often after they have been "theraped" by mental institutions and then they are shut away maybe in the same mental institution after they run amok more than the normal-distribution would predict, then you maybe could really ask some questions. Personal Traits (eg. Mayer-Briggs) are norami-distributed too. So these formulas are quite useful to find out if one tells the truth or not. But it is **not evidence**, but maybe something one should investigate.

Observer Pattern

<https://0x8.ch/HackersCardgame7>

Inventor: Erich Gamma, Richard Helm ...

Year: ~1994

The observer pattern (also called listener pattern) is a design pattern in software development. It belongs to the category of behavior patterns. In the programming language Java it would need an interface (public interface Observer) and it would be used with "implements Observer" (needs exercise and maybe qfire, quantuminserts, Turbine, Tarnoil tries to make it hard for you to learn) it does not mean "surveillance" its a computer science term, but of course such a design pattern can also be abused for surveillance, and eg trigger a16 Card.
To use Design Patterns you first need to learn an OOP Programming Language
